

Stakeholder Memo — AI Multimodal Demonstrator

Subject: Readiness assessment of CLIP, Whisper and unified Gradio application

Value Delivered

The key improvement is the transition from isolated AI capabilities to an integrated workflow that can accept different information types and produce reviewable outputs. This makes the system easier to demonstrate, evaluate and develop toward future service integration.

Capability	Before	After
CLIP	Experimental image understanding with No measurable gate	Image-text similarity can be measured using cosine similarity and evaluated against threshold
Whisper	Basic transcription with reliability issues around longer recordings	Chunked transcription and merging have been developed, with outputs available in structured key information
Unified Gradio App	CLIP and Whisper operate primarily as separate capabilities	A single interface brings the multimodal capabilities together for demos and eval

Named Safety Risk & Mitigation

Risk — incorrect clinical interpretation: transcription errors, image misclassification or incorrect AI extraction could result in an inappropriate understanding of a patient's situation.

Mitigation: AI outputs must remain decision-support only, with human review required before clinically significant action. Quality/confidence gates, source verification, uncertainty handling and auditable outputs should be maintained.

Recommendation

GO — With Conditions

Proceed with controlled demonstration, testing and further development. The current evidence supports continued progression because the capabilities are integrated and can be evaluated using measurable outputs.

However, this is not a GO for unsupervised clinical deployment. Before production use, the system should complete representative real-world validation, document failure cases, maintain privacy and security controls, monitor performance, and establish formal clinical safety validation.

Bottom line: GO for controlled development and evaluation; NO-GO for autonomous clinical use until the stated safety and validation conditions are satisfied.

[Image Caption]

The image shows a healthcare professional in a white coat speaking with a pregnant woman who is sitting on an examination table. The setting appears to be a medical office with an ultrasound machine in the background displaying an image on its screen. The healthcare professional is holding a tablet or clipboard and gesturing with one hand, suggesting a discussion or consultation. The room is well-lit with natural light coming through a window, and there are plants and shelves in the background.

This description is for informational purposes only and is not a medical diagnosis. Please consult an AfyaPlus clinician for assessment.

Good morning. Good morning, doctor. Where exactly does it hurt? The pain gets worse after eating. Do you have vomiting or diarrhea? I vomited once. Have you had this pain before? No, doctor. This is the first time. It's okay. We will examine you and see what is causing the pain. Thank you, doctor.
